### PREFACE.

In the performance of the duty which has been confided to me, of forming a set of Plates as an accompaniment to the text of the work entitled, "Special Anatomy and Histology, by Wm. E. Horner, M. D.," but which should, at the same time, be so extended and general, as to be consulted by all desiring the use of a complete set of Anatomical Plates, the present volume is now offered.

The utility of drawings in illustration of a purely demonstrative branch, is now too well established to require any argument in its favour. Separated from the centre of instruction, and deprived of the advantages of the Dissecting Room, the ideas once so thoroughly acquired soon begin to fade, and the images once so distinct, become confused and mixed. A recourse to plates, in the absence of dead bodies, is then the only means of refreshing our knowledge.

Numerous works, framed with these intentions, have long enjoyed a large share of professional approbation; some from the finished style of their execution; others from some striking feature of simplicity, or adaptation to the wants of medical men.

The claim of the present one is to have been selected from the most accurate of these, as well as from the latest Microscopical Observations on the Anatomy of the Tissues; and, where plates were not deemed satisfactory, to have been enriched by original drawings, from specimens furnished by the beautiful Anatomical Museum of the University of Pennsylvania. In these instances the cut is marked Wistar Museum, or W. M.

In the arrangement of the work, it will be seen that reference has been had to the production of a volume suited to general circulation, of such a size as could be conveniently used in the Lecture, Dissecting, or Operating Room; with a Terminology sanctioned by general usage in the United States, and with concomitant references on the same page, thereby saving to the young student much embarrassment and confusion. Lastly, it has been placed at such a price as will render it easy of acquirement by all.

To the attention bestowed on the plates by the artists employed in their execution, is due much of their fidelity. The original drawings, as well as those which are copies in a reduced form, are from the pencils of Messrs. Pinkerton, French, and Weaver, gentlemen now most favourably known in this department of Anatomy. To say that the engravings are in Mr. Gilbert's best style, is a sufficient guarantee for their beauty, his name being now identified with some of the finest wood engravings made in this country.

- 1. The Compact Structure.
- 2. The Cellular Structure.
- 3. A Transverse section of the Femur, showing its Compact Substance, its Internal Cellular Structure, and the Medullary Canal.

### FIG. 6.

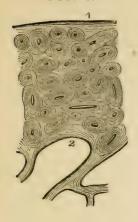

THE TEXTURE OF A BONE AS SHOWN IN A HU-MERUS, AFTER MACERATION IN DILUTE ACID.

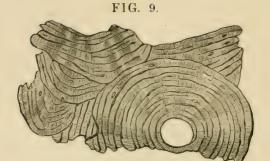

- 1. 1. The Compact Matter as usually seen.
- 2. 2. The same split, so as to show the Longitudinal Fibres composing it.
- 3. The Internal Cellular Matter.
- 4. The Bone seen under its Articular Cartilage. (From the Wistar Museum.)

#### FIG. 7.

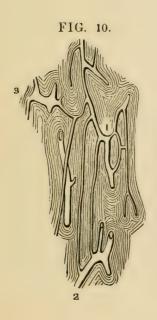

FIG. 11.

### TEXTURE OF BONES.

#### FIG. 8.

- A Transverse section of the Compact Matter as seen under the Microscope; magnified fifteen diameters.
- 1. Periosteal or Outer Layer.
- 2. Medullary or Internal Layer.
- The intermediate Haversian systems of Lamellæ, each perforated by a Haversian Canal, are also shown.

### FIG. 9.

A Transverse section of an old Tibia, showing the appearance of the Lamellæ surrounding the Haversian Canals, and also the appearance of the Lacunæ, when their pores are filled with liquid; magnified.

### FIG. 10.

- A LONGITUDINAL SECTION OF THE COMPACT TISSUE OF THE SHAFT OF A LONG BONE SHOWING THE VESSELS; MAGNIFIED.
- 1. Arterial Canal.
- 2. Venous Canal.
- 3. Dilatation of another Venous Canal.

### FIG. 11.

- THE MINUTE STRUCTURE OF A BONE MAGNIFIED 300 DIAMETERS.
- 1. A Haversian Canal surrounded by its concentric Lamellæ.
- 2. The same with its Purkinjean Corpuscules and converging tubuli.
- 3. The area of one of the canals.
- 4. Direction of the Lamellæ of the great Medullary Canal.
- The outlines of three other canals, showing their form and arrangement in the entire bone, are also seen.

A VIEW OF A PORTION OF AREOLAR OR CELLU-LAR TISSUE, INFLATED AND DRIED, SHOWING THE GENERAL CHARACTER OF ITS LARGER MESHES; MAGNIFIED TWENTY DIAMETERS.

#### FIG. 132.

FAT VESICLES FROM THE OMENTUM, MAGNIFIED ABOUT 300 DIAMETERS, AND ASSUMING THE POLYPHEDRAL FORM, FROM PRESSURE AGAINST ONE ANOTHER. THE CAPILLARY VESSELS ARE NOT REPRESENTED.

#### FIG. 133.

THE BLOOD-VESSELS OF FAT, MAGNIFIED 100 DIAMETERS.

- 1. Minute flattened Fat Lobules, in which the Vessels only are represented.
- 2. Plan of the arrangement of the Capillaries of the exterior of the Vesicles, more highly magnified.
- 3. The Terminal Artery.
- 4. The Primitive Vein.
- 5. The Fat Vesicles of one border of the Lobule separately represented.

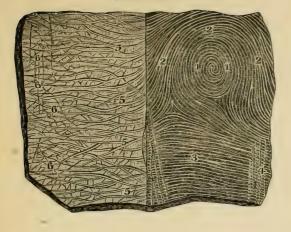

# FIG. 134.

FAT VESICLES FROM AN EMACIATED SUBJECT.

- 1.1. The Cell Membrane.
- 2.2.2. The solid portion collected as a star-like mass, with the Elaine in connexion with it, but not filling the Cell.

THE INTEGUMENTS OF THE BODY.

#### FIG. 135.

THE EXTERNAL SURFACE OF THE EPIDERMIS, AS SEEN UPON THE FRONT EXTREMITY OF THE Fore-Finger, and upon the Ulnar side of THE BACK OF THE ARM, SLIGHTLY MAGNIFIED.

- 1.1. The circular Wrinkles on the front of the Fore-Finger.
- 2.2. The curvature of the Wrinkles and Lines on the outer surface of the circular ones.
  - 3. The Transverse Wrinkles.
- 4.4. Wrinkles made by the Sudoriferous Canals.
- 5.5. The oblique Wrinkles on the Ulnar side of the Back of the Arm.
- 6.6. The peculiar Diamond-shaped Wrinkles on the Back of the Hand, with a few of the Hairs found at their angles.

#### FIG. 136.

THE CELLULAR TISSUE ON THE INTERNAL SUR-FACE OF THE SKIN, WITH ITS ADIPOSE LAYER AND THE FASCIA SUPERFICIALIS. FROM THE INTEGUMENTS OF THE ARM; MAGNIFIED.

- 1.1. The large and smaller Cells of the Skin deprived of the Fat which filled them.
  - 2. The Sub-Cutaneous Adipose Matter.
  - 3. The Fascia Superficialis.

#### FIG. 137.

THE EPIDERMIS, RETE MUCOSUM AND CUTIS VERA ON THE SOLE OF THE FOOT.

The Epidermis and Rete Mucosum have been detached and drawn back, so as to show the Sudoriferous Canals passing from the Cutis Vera into the Rete Mucosum and Epidermis,

1. The Internal Surface of the Epidermis with its Lines and Transverse Furrows.

2. The Rete Mucosum in connexion with the Inter-

nal Face of the Epidermis.

3. The External Surface of the Cutis Vera separated

from the Rete Mucosum and Epidermis.

4.4. Sudoriferous or Spiral Canals, so stretched by the withdrawal of the Epidermis that they appear like very thin and straight Filaments.

## FIG. 138.

THE EPIDERMIS AND RETE MUCOSUM OF THE HEEL SEPARATED FROM EACH OTHER AND SEEN ON THEIR INTERNAL SURFACES, MAGNIFIED SIX TIMES.

- 1.1. The Internal Face of the Epidermis.
- 2.2. The Rete Mucosum.
- 3.3. On the sides of these Figures are the elevated Lines as adapted to the Furrows of the Derm.
  4.4. The deep-seated Furrows corresponding to those
- on the External Face of the Epidermis.

  5.5. The smaller Eminences which sink into the Fur-
- rows between the different series of Papillæ; seen
- in the Furrows.

  6.6. The Cells of the Rete Mucosum in which the Papillæ of the Derm rest.

  These Cells are of the same order as the Cells of the
- Papillæ of the Derm, seen in Fig. 139, to which they correspond.

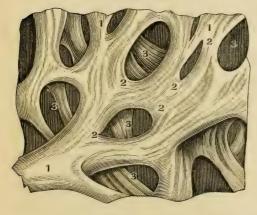

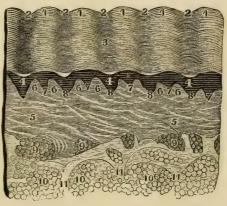

FIG. 142.

THE INTEGUMENTS OF THE BODY.

#### FIG. 139.

THE EXTERNAL SURFACE OF THE EPIDERMIS AND CUTIS VERA, ON THE SOLE OF THE FOOT, MAGNIFIED SIX DIAMETERS.

- (1.) Represents a portion of the Cutis Vera with the Epidermis.
- 1. The Wrinkles, or Furrows.
- 2. The prominent Lines.
- 3. The Funnel-shaped Orifices of the Sudoriferous Canals or the Pores of the Skin.
- (2.) Represents a portion of the Cutis Vera deprived of the Epidermis and Rete Mucosum.
- 4.4. The deep Furrows which correspond to the elevated Lines on the Internal Surface of the Epidermis as seen in Fig. 138, at 3.
- 5.5. The smaller Furrows between the Papillæ, in which the small Prominences of the Rete Mucosum are inserted.
- 6.5. Orifices of the Sudoriferous Canals of the Cutis Vera seen between the Papillæ and corresponding to the Funnel-shaped Orifices of the surface of the Skin.
- 7.7. Ranges of the Papillæ which are inserted into the Rete Mucosum.

#### FIG. 140.

THE LOOPS OF VESSELS IN THE CUTANEOUS PAPILLÆ OF THE HAND. THE ARTERIAL INJECTION HAS SUCCEEDED ADMIRABLY, AND THE WHOLE IS REPRESENTED AS SEEN UNDER THE MICROSCOPE.

- 1.1. The Salient Lines of the Cutis Vera formed by the Papillæ (2.2.)
  - 3. The Furrows.

#### FIG. 141.

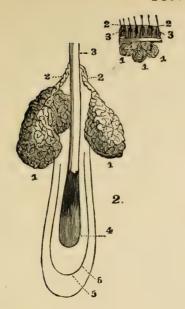

THE INTERNAL RETICULATED AND CELLULAR FACE OF THE CUTIS VERA, MAGNIFIED CONSIDERABLY.

- 1. The greater and smaller Bands of Fibres.
- 2. The junction and intercrossing of these Fibres.
- The greater and smaller Cells from which the Cellular Substance which fills them has been removed.

#### FIG. 142.

- A Perpendicular Section of the Integuments of the Sole of the Foot, as seen under the Microscope.
- 1.1. The Salient Lines of the External Surface of the Skin cut perpendicularly.
- 2.2. The Furrows or Wrinkles of the same.
- 3. The Epidermis or Cuticle, as formed by its Superimposed Layers.
- 4.4. The Rete Mucosum.
- 5.5. The Cutis Vera, with its Cellular Fibres pressed into Fasciculi and each directed towards the Pa pillæ.
- 6.6. The Papillæ, each of which answers to the Prominences on the External Surface of the Skin.
  - 7. The small Furrows between the Papillæ.
  - The deeper Furrows which are between each couple of the Papillæ.
- Cells filled with Fat, and seen between the Bands of Fibres.
- 10. The Adipose Layer with numerous Fat Vesicles.
- 11. Cellular Fibres of the Adipose Tissue, continuous with the Sub-Cutaneous Cellular Tissue, and with that of the Cutis Vera.

## FIG. 143.

A HIGHLY MAGNIFIED DRAWING OF THE CUTA-NEOUS GLANDS OF THE EXTERNAL MEATUS AUDITORIUS.

(Fig. 1.) A Section of the Skin magnified three Diameters.

- 1.1. The deep-seated Glands which secrete the Cerumen or Ear-Wax.
- 2.2. The Hairs on the Surface.
- 3.3. The superficial Sebaceous Glands.

(Fig. 2.) A Hair perforating the Epidermis, highly magnified.

- 1.1. Sebaceous Glands.
- 2.2. Their Excretory Ducts.
  - 3. The Epidermis.
  - 4. The Base of the Hair.
- 5.5. Its Double Follicle.

(Fig. 3.) A view of the Cerumen Gland as formed by the Contorted Tubes.

- 1.1. The Tubes.
  - 2. The Excretory Duct.
- 3. The Vessels supplying it.

#### FIG. 144.

A MAGNIFIED VIEW OF THE SUDORIFEROUS OR-GANS OF THE SKIN ON THE SOLE OF THE FOOT.

This Figure from 1 to 11, inclusive, is the same as in Figure 142.

- 12. The Sudoriferous Follicles.13. The Spiral or Sudoriferous Canals.
- 14. The Infudibular-shaped Pores or Orifices of these Canals.

## FIG. 145.

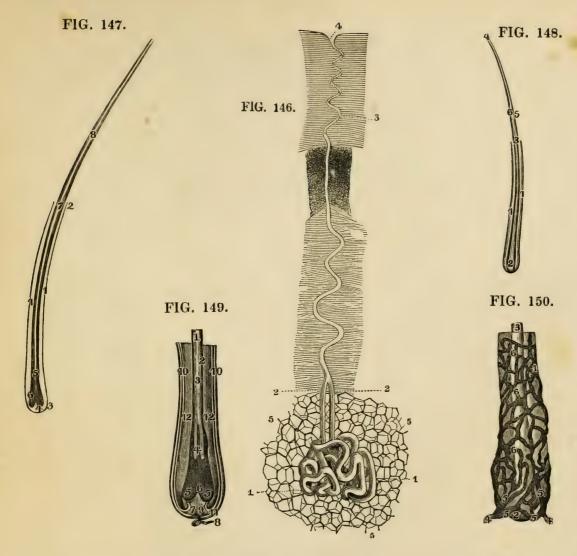

THE PERSPIRATORY ORGANS—GRANULAR SEBA-CEOUS GLANDS AND FOLLICLES OF HAIRS IN THE SKIN OF THE AXILLA; HIGHLY MAGNIFIED.

- 1. Epidermis.
  2. Cutis Vera.
  3. Adipose Tissue.
  4.4. Two Perspiratory Follicles.
  5.5. Their Spiral Canals.
  6.6. Follicles of Hairs.

- 7.7. Sebaceous Glands, two of which almost always belong to each Follicle.
- 8.8. The Acini of these Glands.
  9.9. Their Excretory Ducts, continuous with the Cavity of the Follicle of the Hair.
  10.10. The Orifices of the Follicles of the Hairs.
  11.11. Their Roots.

- 12.12. The Hairs as seen under the Microscope.

## PERSPIRATORY GLANDS AND HAIRS OF THE SKIN.

#### FIG. 146.

- A SUDORIFEROUS GLAND FROM THE PALM OF THE HAND; MAGNIFIED 40 DIAMETERS.
- 1.1. The twisted Tubes composing the Gland.
- 2.2. The Excretory Ducts formed by the union of these Tubes.
  - 3. The Spiral Canal formed by the Excretory Ducts perforating the Epidermis.
- 4. Its Opening on the surface.
- 5.5. The Fat Vesicles in which the Gland is imbedded.

#### FIG. 147.

- A HAIR FROM AN ADULT AS SEEN UNDER THE MICROSCOPE.
- 1.1. The Follicle of the Hair.
  - 2. Its Orifice.
  - 3. The Base of the Follicle.
  - 4. Pulp of the Hair.
  - 5. Its Root.
  - 6. The Bulb in which the Pulp is inserted.
  - 7. Trunk of the Hair.
  - 8. The portion which projects beyond the Skin.

#### FIG. 148.

- A MAGNIFIED VIEW OF A SMALL HAIR FROM THE FACE OF A MAN—REMOVED WITH ITS FOLLICLE AND SEEN UNDER THE MICROSCOPE.
- 1.1. Its Follicle.
  - 2. Root of the Hair.
  - 3. Its Trunk.
  - 4. Its Extremity.
  - 5. Its Cortical or External Substance.
  - 6. Its Internal or Medullary Substance.

## FIG. 149.

- THE ROOT OF ONE OF THE HAIRS OF THE BEARD WITH ITS PULP AND FOLLICLE, CONSIDERABLY MAGNIFIED.
- 1. A small portion of its Trunk.
- 2. The Cortical Substance.
- 3. The Medullary.
- 4. The Root of the Hair.
- The Bifid portion of the Root called the Bulb.

- 6. Its excavated Base, in which the Pulp, 7, is inserted.
- 8. A small Artery.
- 9. Its distribution to the Pulp.
- 10. The Membrane of the Follicle of the Hair.
- 11. Its Base placed in the Pulp of the Hair.
- 12. The Cuticle or Epidermis of the Follicle, which joins with the Bulb of the Hair.

### FIG. 150.

- A SMALL PORTION OF THE FOL-LICLE OF A HAIR OF THE BEARD, WITH THE ARTERIES SUPPLYING IT—VERY HIGHLY MAGNIFIED.
  - 1. Its Follicle.
  - 2. Its Pulp.
- 3. The Trunk of the Hair without the Follicle.
- 4.4. Two Arteries going to the Base of the Follicle.
- 5.5. Their Distribution.
- 6.6. The Reticulated Tissue of the Follicle.

## THE HAIRS AND NAILS.

#### FIG. 151.

- A SEGMENT OF THE SKIN OF THE BEARD ENCLOSING THREE HAIRS, AS SEEN UNDER THE COMPOUND MICROSCOPE, WITH THE ARTERIES INJECTED.
- 1.1. The Hairs without the Skin.
- 2.2. The same in their Follicles.
- 3.3. The Follicles.
- 4.4. The Follicles in the Pulp.
- 5.5. Two Arteries in the Internal Surface of the Skin.
- 6.6. Branches which are distributed around the Hairs in the Skin.
- 7.7. Branches to the Pulp.
- 8.8. The Arterial Net-work around each Follicle.

## FIG. 152.

- THE THUMB-NAIL DETACHED FROM THE THUMB AND SEEN ON ITS EXTERNAL SURFACE, WITH THE EPIDERMIS OF WHICH IT IS A CONTINUATION.
  - 1. Root of the Nail deprived of the Epidermis.

- 2. Its Body.
- 3. Its Summit.
- 4.4. The Epidermis covering the sides of the Nail.
- 5. The Crescent or Lunula of the Nail.

#### FIG. 153.

- THE SAME NAIL SEEN ON ITS INTERNAL SURFACE, WITH THE EPIDERMIS.
  - 1. The Root.
- 2. The Body.
- 3.3. The Sides of the Nail.
- 4.4. A portion of the Epidermis near the Nail.
  - 5. The Crescent.
- The Internal Face of the Nail has been freed from the Rete Mucosum. The prominent Lines and Furrows corresponding to the Lines and Wrinkles of the Cutis Vera, and covered by the Nail, are seen arranged in parallel Lines.

## FIG. 154.

- A LONGITUDINAL SECTION OF THE NAIL OF THE RING FINGER.

- The Third Phalanx.
   The Adipose Tissue.
   The Skin.
   The Root of the Nail and Fold of the Skin in which the Root is inserted.
- 5. The Cutis Vera covered by the Nail. The Epidermis.
- 7. Root of the Nail.
- 8. Its Body.9. Its Summit or free End.

## FIG. 155.

- THE SAME FIGURE VERY HIGHLY MAGNIFIED.
- The References from 1 to 9 inclu-

## GENERAL ANATOMY OF THE MUSCLES.

#### FIG. 156.

THE STAGES OF DEVELOPEMENT OF MUSCULAR FIBRE.

- 1. Arrangement of the Primitive Cells in a Linear Series.
- The Cells united. The Nuclei separated and some of them broken up—Longitudinal Lines becoming apparent.
- 3.4. The transverse Stripes or Bands beginning to show.
  - Transverse Bands fully formed and dark, with the Nuclei disappearing.
  - Elementary Fibres from the Adult, treated with acid, to show the Nuclei.

## FIG. 157.

- Another View of the stages of developement of Muscular Fibre.
- A Muscular Fibre of Animal life enclosed in its Sheath or Myolemma.
- An Ultimate Fibril of the same.
   A more highly magnified View of fig. 1., showing the true nature of the Longitudinal Striæ, as well as the mode of formation of the Transverse Striæ. The Myolemma is here so thin as to permit the Ultimate Fibrils to be
- seen through it.
  4. A Muscular Fibre of Organic life with two of its Nuclei; taken from the Urinary Bladder, and magnified 600 Diameters.
- A Muscular Fibre of Organic life from the Stomach, magnified the same.

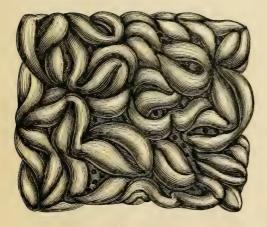

FIG. 335.

MINUTE ANATOMY OF MUCOUS COAT.

FIG. 332.

A VIEW OF THE FOLLICLES OF THE COLON, MAGNIFIED ABOUT 115 TIMES. (Wistar Museum.)

In the Mucous Coat of the Alimentary Canal is to be found a Cribriform Texture of Veins, almost without an Artery. The fine Venous Trunks of a deeper Layer have their originating extremities directed vertically towards the cavity of the Gut, and the meshes of the Venous Intertexture are exceedingly minute, producing in the Colon an appearance resembling a plate of metal pierced with round holes closely bordering on each other. These holes are the Follicles of Lieberkuhn, are gaping Orifices, the Edges of which are rounded off, and their depth is that of the thickness of the Venous Anatomosis. The aggregate number of these Follicles in the Colon, is estimated at Nine Million Six Hundred and Twenty Thousand. (Horner's Anat. Vol. 2, p. 48.)

FIG. 333.

A VIEW OF THE FOLDS AND FOLLICLES OF THE STOMACH, HIGHLY MAGNIFIED. (W. Museum.)

In the Stomach the Follicles vary much in size, serpentine Ridges, to and many of the smaller ones open into the larger. standing on its Base.

On an average, about Two Hundred and Twenty-Five are found upon every square of an eighth of an inch, which, by calculation from this preparation, would give One Million Two Hundred and Ninety-Six Thousand Follicles to the entire Stomach. (Horner's Anat. Vol. 2d, page 48, &c.)

FIG. 334.

A VIEW OF THE FOLLICLES AND VILLI OF THE JEJUNUM, HIGHLY MAGNIFIED. (W. Museum.)

The Villi, being erected by injection, here run into each other and press one upon another like the convolutions of the Cerebrum. Some of them are merely semi-oval plates, the Transverse Diameter of which exceeds the length or elevation. The Follicles are seen between them and at their Bases.

FIG. 335.

A VIEW OF THE VILLI AND FOLLICLES OF THE ILEUM, HIGHLY MAGNIFIED. (W. Museum.)

These Villi are curved with their Edges bent in, or concave; but there is, in the whole Canal, every variety of shape, from oblong, curved and serpentine Ridges, to the laterally flattened Cone standing on its Base.

These Glands appear to be small Lenticular Excavations, containing, according to Boehm, a white, milky and rather thick Fluid, with numerous round Corpuscules of various sizes, but mostly smaller than Blood Globules. The Meshes seen in the Cut are the ordinary tripe-like Folds of the Mucous Coat, and not the Venous Texture spoken of under the Follicles.
